this book deals with microeconomic theory as it concerns general economic equilibrium and the implications for prices and resource allocation students with a background in mathematics will find in this volume a broad comprehensible overview of the ideas which have contributed to our understanding of general equilibrium

ariel rubinstein s well known lecture notes on microeconomics now fully revised and expanded this book presents ariel rubinstein s lecture notes for the first part of his well known graduate course in microeconomics developed during the fifteen years that rubinstein

taught the course at Tel Aviv University, Princeton University, and New York University. These notes provide a critical assessment of models of rational economic agents and are an invaluable supplement to any primary textbook in microeconomic theory. In this fully revised and expanded second edition, Rubinstein retains the striking originality and deep simplicity that characterize his famously engaging style of teaching. He presents these lecture notes with a precision that gets to the core of the material and he places special emphasis on the interpretation of key concepts. Rubinstein brings this concise book thoroughly up to date, covering topics like modern choice theory and including dozens of original new problems written by one of the world's most respected and provocative economic theorists. This second edition of *Lecture Notes in Microeconomic Theory* is essential reading for students, teachers, and research economists. Fully revised, expanded, and updated, it retains the engaging style and method of Rubinstein's well-known lectures. It covers topics like modern choice theory, features numerous original new problems, including 21 new review problems. Solutions manual available only to teachers can be found at gametheory.tau.ac.il/microtheory.

People pursue their own interests, whatever those interests might be. Some people have interests that are narrow and selfish, while others have interests that are broad and altruistic. The idea that people are self-interested underpins all of economic analysis and raises two fundamental questions: 1. How do people choose the actions they think will further their own interests? 2. Can the potentially conflicting interests of different people be made to mesh in some sort of socio-economic equilibrium? This book is devoted to a detailed study of the first question. Its companion volume, *Economy-wide Microeconomics: Equilibrium, Optimality, Applications, and Tests*, makes a detailed study of the second question. Following some foundational remarks, this book studies the Arrow-Debreu theory of consumer choice. That theory supposes people choose so as to maximize a complete, continuous, transitive, and reflexive binary preference relation over a non-empty and compact choice set. The book then studies numerous refinements, generalizations, and extensions of each of these restrictions, up to and including recent work on behavioral theories of choice and choice behaviour when preferences are intransitive, incomplete, discontinuous. Also considered is choice behaviour in environments that are not necessarily compact. A study is also made of intertemporal choice and choice under uncertainty. The study of Arrow-Debreu choice theory and its extensions are presented from the primal, dual, and revealed preference points of view. Consumers are not the only agents in the economy; as producers are present as well. Beginning with a study of the Arrow-Debreu idea that producers choose from a convex production set so as to maximize profit, the book considers extensions and generalizations of this framework, particularly to non-convex environments. The study is presented from the primal and dual points of view. The final chapter in the book provides a link to its companion volume. The chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above. Resources are available to instructors who adopt this book.
