this book makes it easy for you to find what effect environment has on the  
corrosion of metals and alloys however this volume offers information on  
additional environments including concrete soil groundwater distilled water  
sodium acetate and more thereas also updated and expanded coverage of  
previously discussed environments as well as information on environments  
which deal with the dairy food brewing aerospace petrochemical and building  
industries the environments are listed alphabetically each listing includes a  
general description of the conditions a comment on the corrosion  
characteristics of various alloys in such a situation a bibliography of recent  
articles specific to the environment tables consolidating and comparing  
corrosion rates at various temperatures and concentrations for various alloys  
and graphical information also included are summaries on the general corrosion  
characteristics of major metals and alloys

this text identifies the need for effective steam trapping and discusses the  
interface between steam energy and the thermodynamics of steam and  
condensate

this book was written to assist plant engineers and technicians in the areas of  
cost effective steam distribution and condensate systems management  
including the reduction of toxic waste by products as now required by  
government standards the fully illustrated presentation offers proven  
engineering and management techniques for simultaneously reducing steam  
waste fuel consumption and toxic wastes thereby resulting in significant long

term cost savings you'll find detailed coverage of the steam and condensate piping structure layout excavations and enclosures system protection thermal insulation valves valve drive mechanisms controls and metering and steam traps

this complete revision of applied process design for chemical and petrochemical plants volume 1 builds upon ernest e ludwig's classic text to further enhance its use as a chemical engineering process design manual of methods and proven fundamentals this new edition includes important supplemental mechanical and related data nomographs and charts also included within are improved techniques and fundamental methodologies to guide the engineer in designing process equipment and applying chemical processes to properly detailed equipment all three volumes of applied process design for chemical and petrochemical plants serve the practicing engineer by providing organized design procedures details on the equipment suitable for application selection and charts in readily usable form process engineers designers and operators will find more chemical petrochemical plant design data in volume 2 third edition which covers distillation and packed towers as well as material on azeotropes and ideal non ideal systems volume 3 third edition which covers heat transfer refrigeration systems compression surge drums and mechanical drivers a kayode coker is chairman of chemical process engineering technology department at jubail industrial college in saudi arabia he is both a chartered scientist and a chartered chemical engineer for more than 15 years and an author of fortran programs for chemical process design analysis and simulation gulf publishing co and modeling of chemical kinetics and reactor design butterworth heinemann provides improved design manuals for methods and proven fundamentals of process design with related data and charts covers a complete range of basic day to day petrochemical operation topics with new material on significant industry changes since 1995
